## To find the hour of the Day by this Table.

*Take a Staff of what Length you pleaſe, & (with a pair of Compaſſes) divide it into 10 equal parts, marking them upon the Staff; then in ſome plain level place, where the Sun doth ſhine, ſet it upright, and mark where the end of the ſhadow thereof falls; which done, meaſure with your ſtaff the length of the ſhadow, & note the parts it contains, which find out in this Table, againſt the day of the Month, and over head you have the true Hour of the Day.*

*Suppoſe the 9 of* April *or 13 of* Auguſt, *I ſhould find the ſhade of the ſtaff to be 30 parts & a quar. (that is 3 ſtaffs length & a q.) therefore ſeeking in the Tab. againſt the ſaid days, I ſee overhead that it is then either 7 in the morn. or 5 in the aftern.: ſo that if my obſervation was in the morn. it was 7, if the aftern. 5 a clock.* By this Example, you may ſee the eaſe & excellent Uſe of the Table, which is as ready as any moveable Sun-dial: ſo that wherſoever you are, or travel, you may (having this book about you) ſpeedily know the true Hour, &c. # ALMANACK

FOR

The Year of our Lord God, 1689.

Being the first after the Bissextile, or Leap year, and from the Worlds Creation, according to Sacred Writ, 5638 years.

Wherein is contained the description of the four Quarters of the Year: As also a Chronological Table of many things worth remembrance, since the Creation, until this present Year, 1689 Collected for the most part out of Ecclesiastical History, and other good Authors, something augmented. The like not extant by any other.

By Fr. Perkins, Well-willer to the Mathematicks.

LONDON,

Printed by *R. Everingham*, for the Company of Stationers, 1689. *Cum Privilegio.*

# A Description of the four Quarters of the Year; and first of Winter.

*Sol* in *Capricorn, Aquarius, Pisces.*

According to the custom of Writers in this kind, Winter-quarter is the first quarter, which took beginning the 11 day of December, at which time the Sun enter'd into the first degree of the cold and dry Sign Capricorn, being the most remote from us, in his farthest South Declination, causing the days with us so be shortest, and the nights longest. This quarter continues until the Sun hath slowly passed through Capricorn, Aquarius, and Pisces; and doth naturally resemble Old Age.

## Of the Spring. *Sol* in *Aries, Taurus, Gemini.*

This quarter doth take beginning the 9th of March, at which time the Sun entreth into the first minute of Aries, making equal day and night; and continues whilst the Sun is passing through Aries, Taurus and Gemini. This quarter doth resemble Growing Youth.

## Of Summer. *Sol* in *Cancer, Leo, Virgo.*

The Summer-quarter doth take his beginning when the Sun enters into the first degree of Cancer, which will be this year on the 11 of June; and continues whilst the Sun passeth through Cancer, Leo, Virgo. Now the days are longest, and the air hottest; therefore but for necessity, bid Physick adieu.

## Of Autumn. *Sol* in *Libra, Scorpio, Sagitarius.*

Autumn, or Harvest-quarter (commonly called the Fall of the Leaf, of some the latter Spring) begins when the Sun enters into the first degree of Libra, again making the day and night of equal length; which will be his year the 12 of September; and continues whilst the Sun passeth through Libra, Scorpio, and Sagitarius. This quarter doth fitly resemble Declining Age, and Phlegmatick Complexion.
